DESCRIPTION

The following specifications are applied to the following Super-TFT module.

Note: Inverter for back light unit is not built in this module.

Product Name: TFTMD80120CBB

General Specifications

Effective Display Area : (H)687.36x (V)412.42 (mm)

Number of Pixels : (H)1,280x(V)768 (pixels)

Pixel Pitch : (H)0.537x(V)0.537 (mm)

Color Pixel Arrangement : R+G+B Vertical Stripe

Display Mode : Transmissive Mode

Normally Black Mode

Top Polarizer Type : Anti-Glare

Number of Colors : 16,777,216 (colors)

Viewing Angle Range : Super Wide Version

(Horizontal & Vertical : 170°, CR≥10)

Input Signal : 1-channel LVDS (LVDS:Low Voltage Differential Signaling)

Back Light : 16 pcs. of CCFL

External Dimensions : (H)764.0x(V)465.0x(t)38.0 (mm)

Weight : 8,000g typ.

Hitachi Displays, Ltd. Date Nov.10,2003	Sheet No. 3284STD-2188-1	Page 3-1/1

1. ABSOLUTE MAXIMUM RATINGS

1.1 Environmental Absolute Maximum Ratings

ITEM (Oper	ating	Sto	rage	TT 1:	.
ITEM	Min.	Max.	Min.	Max.	Unit	Note
Temperature	0	50	-20	60	$^{\circ}\mathbb{C}$	1),5)
Humidity	2	2)		2)	%RH	1)
Vibration	-	4.9(0.5G)	ı	9.8 (1G)	m/s 2	3)
Shock	-	29.4(3G)	-	147 (15G)	m/s 2	4)
Corrosive Gas	Not Acc	eptable	Not Aco	ceptable	-	
Illumination at LCD Surface	-	50,000	_	50,000	lx	
LCD Surface						

Note 1) Temperature and Humidity should be applied to the glass surface of a Super-TFT module, not to the system installed with a module.

The temperature at the center of rear surface should be less than 70 °C on the condition of operating. The brightness of a CCFL tends to drop at low temperature. Besides, the life-time becomes shorter at low temperature.

2) Ta ≤ 40 °C · · · · · Relative humidity should be less than 85%RH max. Dew is prohibited.

Ta> 40 °C · · · · · Relative humidity should be lower than the moisture of the 85%RH at 40 $^{\circ}$ C.

- 3) Frequency of the vibration is between 15Hz and 100Hz. (Remove the resonance point)
- 4) Pulse width of the shock is 10 ms.
- 5) Long operation under low temperature may cause some portion of display area to be reddish for several minutes after turning on the product.

However, it does not affect the characteristics and reliability of the product.

1.2 Electrical Absolute Maximum Ratings

(1)Super-TFT Module

 $V_{SS} = 0 V$

ITEM	SYMBOL	Min.	Max.	Unit	Note
Power Supply Voltage	V dd	0	13.2	V	
Input Voltage for logic	Vı	-0.3	3.6	V	1)
Electrostatic Dynahility	Vesd0	土1	00	V	2),3)
Electrostatic Durability	Vesd1	± 8		kV	2),4)

Note 1)It is applied to pixel data signal and clock signal.

- 2)Discharge Coefficient : 200pF-250 Ω, Environmental : 25 °C-70 % RH
- 3) It is applied to I/F connector pins.
- 4)It is applied to the surface of a metallic bezel and a LCD panel.

(2) Back-light

GND = 0 V

ITEM	SYMBOL	Min.	Max.	Unit	Note
Input Current	IL	-	7.0	mArms	1)
Input Voltage	VL	_	2,000	Vrms	2)

Note 1)The specification shall be applied to each CFL. The specification is defined at ground line.

2)The specification shall be applied at connector pins for a CFL at start-up.

Hitachi Displays, Ltd.	Date	Nov.10,2003	Sheet No.	3284STD-2188-1	Page	4-1/1
------------------------	------	-------------	--------------	----------------	------	-------

2. OPTICAL CHARACTERISTICS

The following optical characteristics are measured under stable conditions. It takes about 30 minutes to reach stable conditions. The measuring point is the center of display area unless otherwise noted. The optical characteristics should be measured in a dark room or equivalent state.

Measuring equipment Pritchard 1980A, or equivalent

Temperature =25 $^{\circ}$ C \ VDD=12.0V \ f V=60Hz \

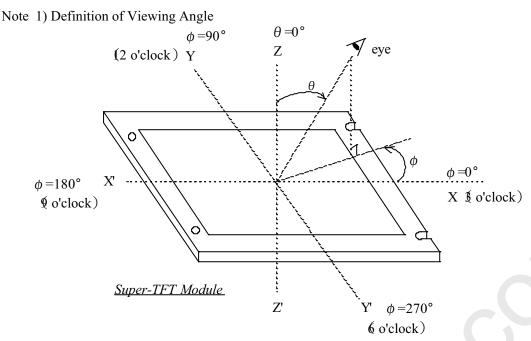

IL=5.0mA (average of 16 pieces of CFLs, PWM:Duty 100%) , CTL = Low

Hitachi Displays, Ltd.	Date	Nov.10,2003	Sheet No.	3284STD-2188-1	Page	5-1/2

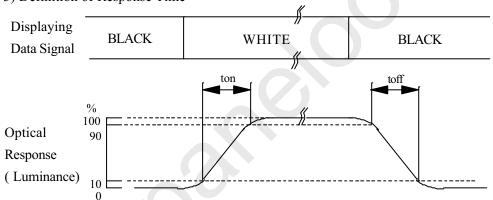

Global LCD Panel Exchange Center

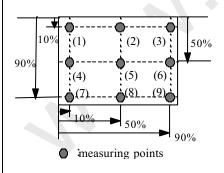

2) Definition of Contrast Ratio (CR)

3) Definition of Response Time

4) Definition of Brightness Uniformity

Display pattern is white (255 level) . The brightness uniformity is defined as the following equation. Brightness at each point is measured, and average, maximum and minimum brightness is calculated.

Buni=
$$\frac{\boxed{\text{Bmax or Bmin} - \text{Bave}}}{\text{Bave}} \times 100$$

where, Bmax = Maximum brightness

Bmin = Minimum brightness Σ (B(k)) Bave= Average brightness =

5) Variation of color position on CIE is defined as difference between colors at $\theta = 0^{\circ}$ and at $\theta = 50$ °& $\phi = 0$ °,90°,180°,270°.

Hitachi Displays, Ltd. Date Nov.10,2003 Sheet No. 3284STD-2188-1 Page 5-2/2
--

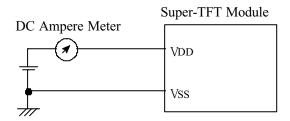

3. ELECTRICAL CHARACTERISTICS

3.1 TFT-LCD Module

Ta=25℃, Vss=0V

ITEM	SYMBOL	Min.	Тур.	Max.	Unit	Note
Power Supply Voltage	Vdd	11.4	12.0	12.6	V	
Power Supply Current	р́р	_	0.59	0.80	A	1),2)
Ripple Voltage of Power Supply	Vddr	_	_	0.15	V	

Note 1) DC current at fv=60.0Hz, fCLK=82MHz, VDD=12.0V and Display pattern is white.

2) Current fuse is built in a module. Current capacity of power supply for VDD should be larger than 4A, so that the fuse can be opened at the trouble of power supply.

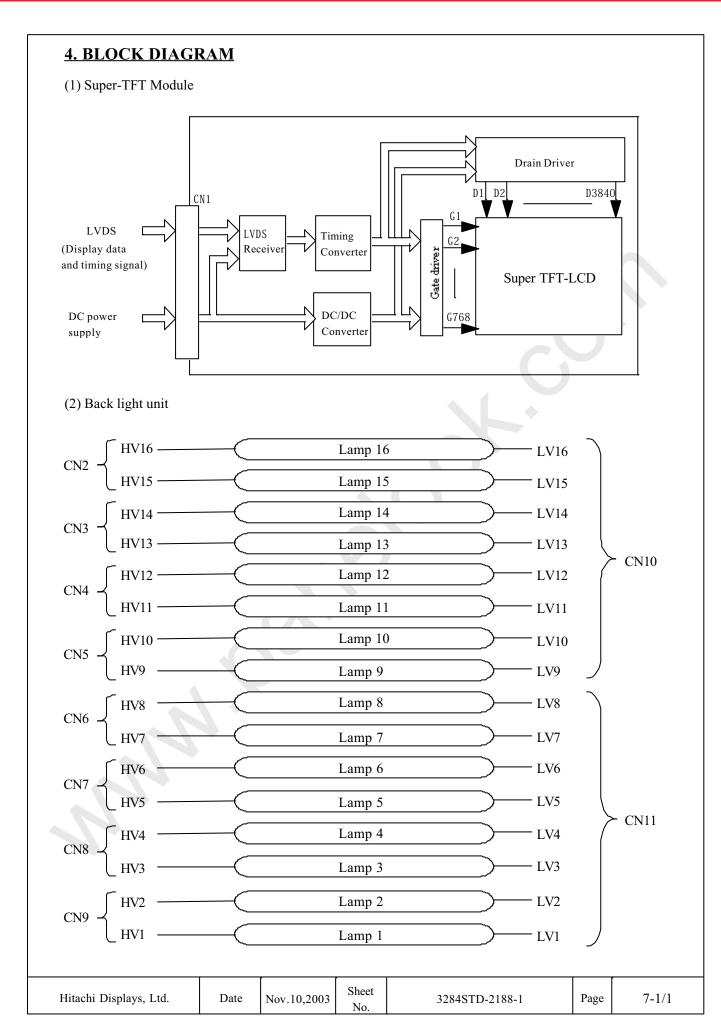

3.2 Back Light

ITEM	SYMBOL	Min.	Typ.	Max.	Unit	Note
Input Current	IL	3.0	5.0	6.0	mArms	1)
Input Voltage	VL	1	1290	1	Vrms	
Frequency	f0	50	55	60	kHz	2)
Kick-Off Voltage	Vs	-	-	1,600	V	3)

Notes 1) The specification shall be applied to each CFL. The specification is defined at ground line.

- 2) Frequency of power supply for a CFL may cause the interference with HSYNC frequency and cause beat or flicker on the display. Therefore, lamp frequency shall be as different as possible from HSYNC frequency in order to avoid the interference.
- 3) Ta = 0 degree

					_	
Hitachi Displays, Ltd.	Date	Nov.10,2003	Sheet No.	3284STD-2188-1	Page	6-1/1

5. INTERFACE PIN ASSIGNMENT

5. 1 TFT-LCD MODULE

CN1: JAE FI-SEB20P-HF13

(Matching connector : JAE FI-SE20M or equivalent)

Pin No.	Symbol	Description	Note
1	VDD	Power Supply (typ.+12V)	1)
2	VDD		
3	VSS	GND (0V)	2)
4	VSS		
5	Rx0-	Pixel Data	3)

BLOCK DIAGRAM OF INTERFACE

G0~G7 : Pixel G Data
B0~B7 : Pixel B Data

HSYNC : Horizontal synchronization signal VSYNC : Vertical synchronization signal DTMG : Display timing signal

Notes

es 1) The system must have the transmitter to drive the module.

2) LVDS cable impedance shall be 50 ohms per signal line or about 100 ohms per twist-pair line when it is used differentially.

Hitachi Displays, Ltd.	Date	Nov.10,2003	Sheet No.	3284STD-2188-1	Page	8-2/5

Notes 1) Definition of gray scale:

 $Color(n) \bullet \bullet \bullet \bullet \text{Number in parenthesis indicates gray scale level. Larger n corresponds to brighter level.}$

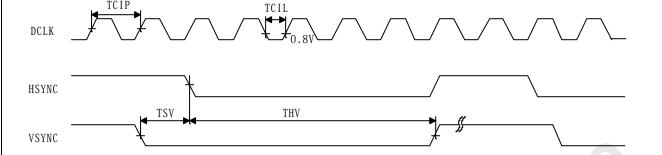

2) Data: 1:High, 0:Low

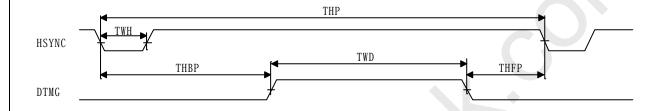

Hitachi Displays, Ltd.	Date	Nov.10,2003	Sheet No.	3284STD-2188-1	Page	8-5/5

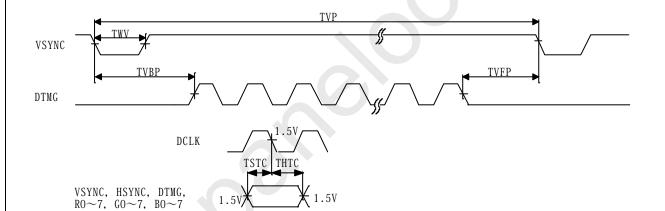

6. INTERFACE TIMING **6.1 TIMING CHART**

Global LCD Panel Exchange Center

1) Reference level for each timing signal is 1.5V unless it is stated on the chart, high level voltage(VIH) and Notes low level voltage(VIL) are defined as follows:

VIH ≥ 2.0 V $VIL \leq 0.8 V$

The above definition conforms to the specifications of LVDS transmitter

- (THC63LVDM83A / by THine Microsystems, Inc.).
- 2) The timing of DCLK to other signals conforms to the specifications of LVDS transmitter.
- 3) HSYNC, VSYNC timing is specified in negative polarity.
- 4) HSYNC pulse is needed while data is invalid (blanking period).

Hitachi Displays, Ltd.	Date	Nov.10,2003	Sheet No.	3284STD-2188-1	Page	9-1/3

VSYNC	Frequency	fV	48	60	62	Hz	4)
	Set up Time	TSV	0	_	_	TCIP	to HSYNC
	Hold Time	THV	8	_	_	TCIP	
	Period	TVP	772		900	THP	
	Width-Active	TWV	1	_	120	THP	
DTMG	Horizontal Back porch	THBP	16	_	-	TCIP	
	Horizontal Front Porch	THFP	0	_	-	TCIP	
	Vertical Back Porch	TVBP	2		1)	THP	
	Vertical Front porch	TVFP	2		1)	THP	
	Width-Active	TWD	1280	1280	1280	TCIP	
COMMON	Set up Time	TSTC	5	_	2)	ns	
	Hold Time	THTC	3	-	2)	ns	

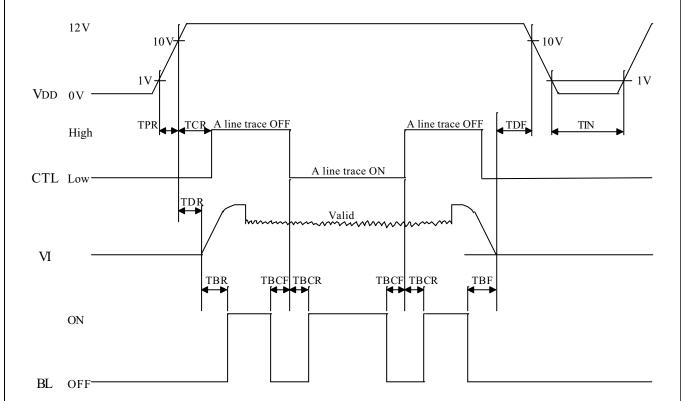

In addition to the above, these timing should conforms to the followings.

- 1) TVBP+TVFP≧4 THP
- 2) TSTC and THTC conforms to the specifications of LVDS transmitter. It is preferable to check the specifications of LVDS transmitter in your system.
- 3) TVP fluctuation should be kept within ± 1 line.
- 4) A line trace function does not allowed in PAL.

Hitachi Displays, Ltd. Date Nov.10,200	Sheet No.	3284STD-2188-1	Page	9-2/3

Global LCD Panel Exchange Center

6.3 TIMING BETWEEN INTERFACE SIGNALS AND POWER SUPPLY

Timing of power supply voltage and input signals should be used under the following specifications.

$$0ms \le TPR \le 10ms$$

$$10ms \le TDR \le 50ms$$

$$0ms \le TDF \le 50ms$$

$$TIN \geqq 1s$$

$$200 \text{ms} \leq \text{TBR} \leq 500 \text{ms}$$

$$4ms \le TCR \le 10ms$$

$$0 \, \text{ms} \leq T \, \text{BCF}$$

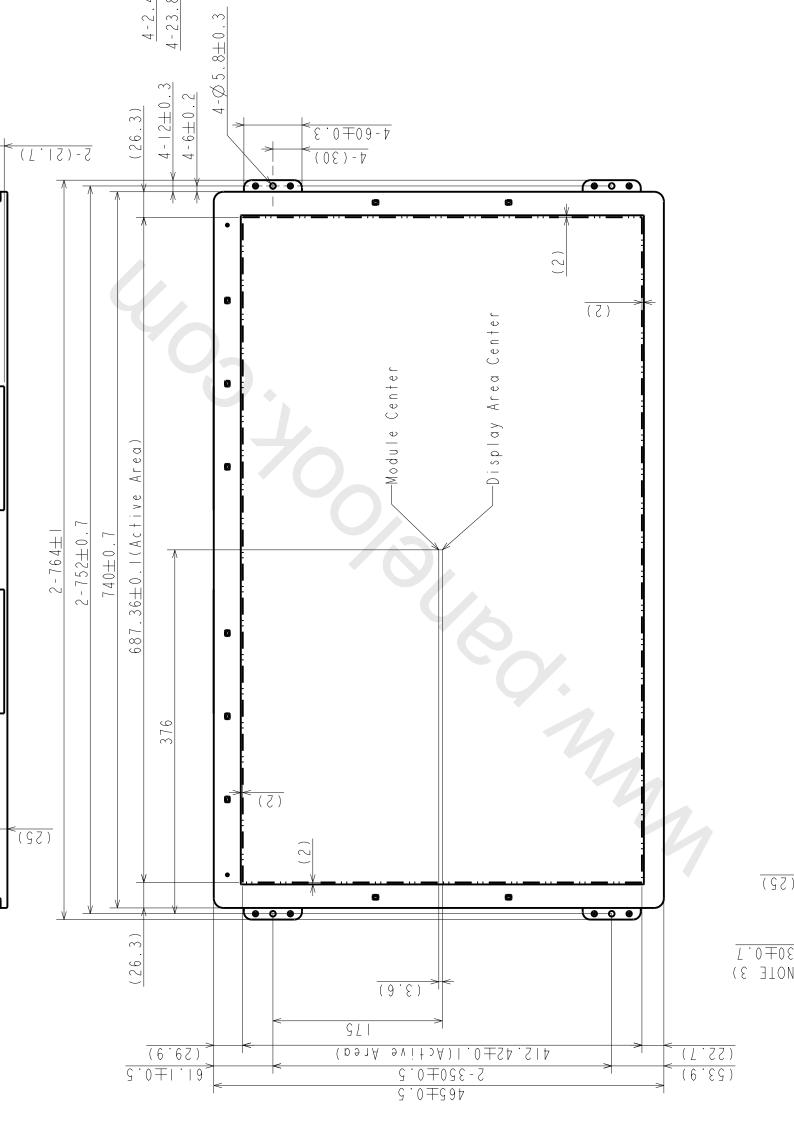

$$200\,ms \leqq TBCR$$

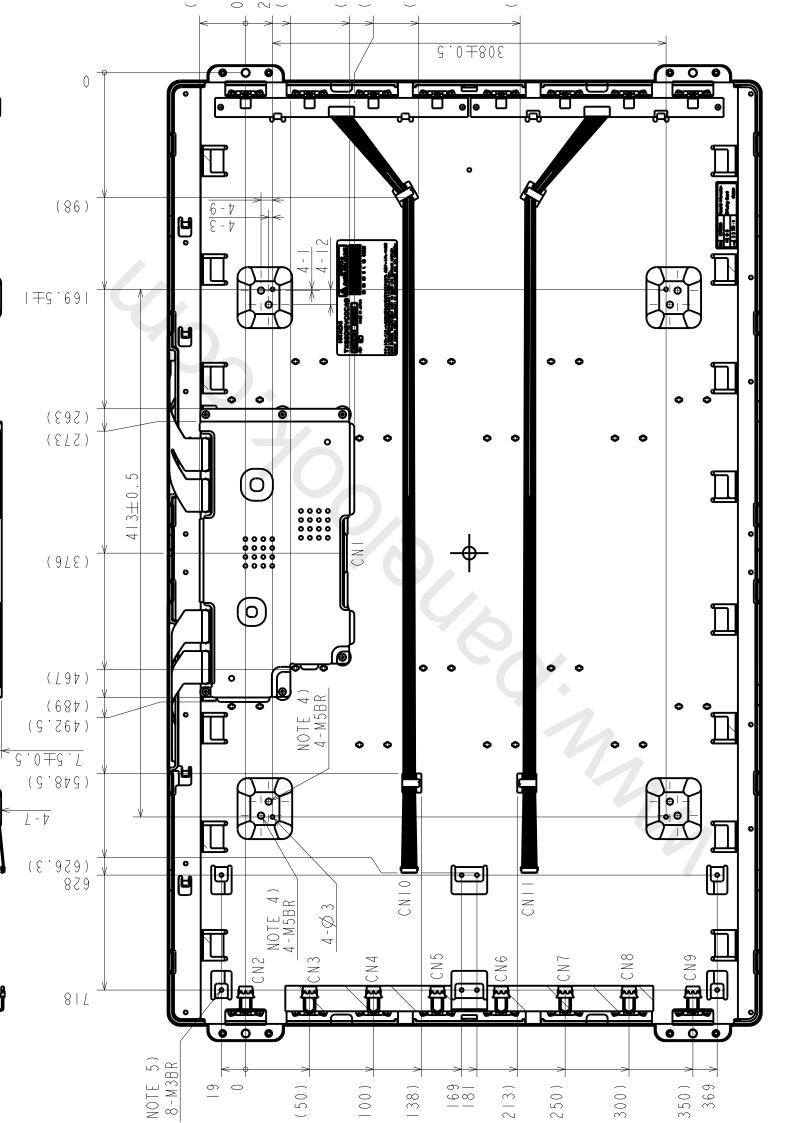

During CTL switching, follows timing should be kept.

•Don't continuously output timing TVP \leq 79 or TVP \geq 2047

•Don't change DCLK frequency.

	8 ∼ 14	2
	15~21	3
	22~28	4
	29~31	5

- 4) It is the mark that was opened up by production person to take correspondence with production number.
- 8.2 Revision (REV.) control

REV. is the column for manufacturing convenience. A-Z except I and O may be written on this column.

8.3 Location of lot mark

Lot mark is printed on a label. The label is on the metallic bezel as shown in 7. External Dimensional. The style of character will be changed without notice.

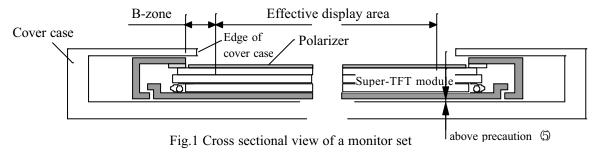

10. PRECAUTION

Please pay attention to the followings when a Super-TFT module with a back-light unit is used, handled and mounted.

10.1 Precaution to handling and mounting

- (1) Applying strong force to a part of the module may cause partial deformation of frame or mold, and cause damage to the display.
- (2) The module should gently and firmly be held by both hands. Never hold by just one hand in order to avoid any internal damage. Never drop or hit the module.
- (3) The module should be installed with mounting holes at each corner of a module.
- (4) Uneven force such as twisted stress should not be applied to a module when a module is mounted on the cover case. The cover case must have sufficient strength so that external force can not be transmitted directly to a module.
- (5) It is recommended to leave a space between a module and a holding board of a module so that partial force is not applied to a module.

- (6) The edge of a cover case should be located inside more than 1mm from the edge of a module front frame.
- (7) A transparent protective plate should be added on the display area of a module in order to protect a polarizer and Super-TFT cell. The transparent protective plate should have sufficient strength so that the plate can not touch a module by external force.
- (8) Materials included acetic acid and choline should not be used for a cover case as well as other parts and boards near a module. Acetic acid attacks a polarizer. Choline attacks electric circuits due to electro-chemical reaction.
- (9) The polarizer on a TFT cell should carefully be handled due to its softness, and should not be touched, pushed or rubbed with glass, tweezers or anything harder than HB pencil lead. The surface of a polarizer should not be touched and rubbed with bare hand, greasy clothes or dusty clothes.
- (10) The surface of a polarizer should be gently wiped with absorbent cotton, chamois or other soft materials slightly contained petroleum benzene when the surface becomes dirty. Normal-hexane as cleaning chemicals is recommended in order to clean adhesives which fix front/rear polarizers on a Super-TFT cell. Other cleaning chemicals such as acetone, toluen and alcohol should not be used to clean adhesives because they cause chemical damage to a polarizer.
- (11) Saliva or water drops should be immediately wiped off. Otherwise, the portion of a polarizer may be deformed and its color may be faded.
- (12) The module should not be opened or modified. It may cause not to operate properly.

Hitachi Displays, Ltd.	Date	Nov.10,2003	Sheet No.	3284STD-2188-1	Page	12-1/3	

- (13) Metallic bezel of a module should not be handled with bare hand or dirty gloves. Otherwise, color of a metallic frame may become dirty during its storage. It is recommended to use clean soft gloves and clean finger stalls when a module is handled at incoming inspection process and production (assembly) process.
- (14) Lamp(CCFL) cables should not be pulled and held.

10.2 Precaution to operation

- (1) The ambient temperature near the operated module should be satisfied with the absolute maximum ratings. Unless it meets the specifications, sufficient cooling system should be adopted to system.
- (2) The spike noise causes the mis-operation of a module. The level of spike noise should be as follows: -200mV<=over- and under- shoot of VDD<= +200mV VDD including over- and under- shoot should be satisfied with the absolute maximum ratings.
- (3) Optical response time, luminance and chromaticity depend on the temperature of a Super-TFT module. Response time and saturation time of CCFL luminance become longer at lower temperature operation.
- (4) Sudden temperature change may cause dew on and/or in the a module. Dew males damage to a polarizer and/or electrical contacting portion. Dew causes fading of displayed quality.
- (5) Fixed patterns displayed on a module for a long time may cause after-image. It will be recovered soon.
- (6) A module has high frequency circuits. Sufficient suppression to electromagnetic interference should be done by system manufacturers. Grounding and shielding methods may be effective to minimize the interference.
- (7) Noise may be heard when a back-light is operated. If necessary, sufficient suppression should be done by system manufacturers.
- (8) The module should not be connected or removed while a main system works.
- (9) Inserting or pulling I/F connectors causes any trouble when power supply and signal dates are on-state. I/F connectors should be inserted and pulled after power supply and signal dates are turned off.

10.3 Electrostatic discharge control

- (1) Since a module consists of a Super-TFT cell and electronic circuits with CMOS-ICs, which are very weak to electrostatic discharge, persons who are handling a module should be grounded through adequate methods such as a list band. I/F connector pins should not be touched directly with bare hands.
- (2) Protection film for a polarizer on a module should be slowly peeled off so that the electrostatic charge can be minimized.

10.4 Precaution to strong light exposure

(1) A module should not be exposed under strong light. Otherwise, characteristics of a polarizer and color filter in a module may be degraded.

10.5 Precaution to storage

When modules for replacement are stored for a long time, following precautions should be taken care of:

- (1) Modules should be stored in a dark place. It is prohibited to apply sunlight or fluorescent light during storage. Modules should be stored at 0 to 35 °C at normal humidity (60%RH or less).
- (2) The surface of polarizers should not come in contact with any other object. It is recommended that modules should be stored in the Hitachi's shipping box.

No. 320451D-2100-1 1age 12 2/3	Hitachi Displays, Ltd.	Date	Nov.10,2003		3284STD-2188-1	Page	12-2/3
--------------------------------------	------------------------	------	-------------	--	----------------	------	--------

- (1) The protection film for polarizers should be pealed off slowly and carefully by persons who are electrically grounded with adequate methods such as a list band. Besides, ionized air should be blown over during peeling action. Dusts on a polarizer should be blown off by an ionized nitrogen gun and
- (2) The protection film should be peeling off without rubbing it to the polarizer. Because, if the film is rubbed together with the polarizer, since the film is attached to the polarizer with a small amount of adhesive, the adhesive may remain on a polarizer.
- (3) The module with protection film should be stored on the conditions explained in 10.5 (1). However, in case that the storage time is too long, adhesive may remain on a polarizer even after a protection film is peeled off. Besides, in case that a module is stored at higher temperature and/or higher humidity, adhesive may remain on a polarizer. The remained adhesive may cause non-uniformity of display image.
- (4) The adhesive can be removed easily with Normal-Hexane. The remained adhesive or its vestige on the polarizer should be wiped off with absorbent cotton or other soft materials such as chamois slightly contained Normal-Hexane.

10.7 Safety

- (1) Since a Super-TFT cell and lamps are made of glass, handling to the broken module should be taken care sufficiently in order not to be injured. Hands touched liquid crystal from a broken cell should be washed sufficiently.
- (2) The CFL inverter should be designed to include the function of output shutdown in case the output overcurrent happen due to any backlight trouble. The shutdown function should be assured to work in abnormal condition at the actual system.
- (3) The module should not be taken apart during operation so that back-light drives by high voltage.

10.8 Environmental protection

- (1) The Super-TFT module contains cold cathode fluorescent lamps. Please follow local ordinance or regulations for its disposal.
- (2) Flexible circuits board and printed circuits board used in a module contain small amount of lead. Please follow local ordinance or regulations for its disposal.

10.9 Use restrictions and limitations

- (1) This product is not authorized for use in life support devices or systems, military applications or other applications which pose a significant risk of personal injury.
- (2) In no event shall Hitachi, Ltd., be liable for any incidental, indirect or consequential damages in connection with the installation or use of this product, even if informed of the possibility thereof in advance. These limitations apply to all causes of action in the aggregate, including without limitation breach of contact, breach of warranty, negligence, strict liability, misrepresentation and other torts.

10.10 Others

(1) Electrical components which may not affect electrical performance are subjective to change without notice because of their availability.
